PRESENTATION DES RESULTATS DE L'ETUDE DE RENTABILITE DES LIGNES 1988

Les résultats de l'étude de rentabilité des lignes 1988 seront présentés dans un seul document qui comprendra deux parties.

La première partie présentera les commentaires des résultats, lesquels seront basés sur un tableau annexé donnant une vision comparative de l'évolution de certaines grandeurs caractéristiques de l'exploitation des lignes de l'ONATRACOM et sur les tableaux habituellement publiés à l'occasion de chaque actualisation de l'étude de rentabilité des lignes.

La deuxième partie comprendra les tableaux de l'étude de rentabilité des lignes, lesquels sont répartis en trois groupes:

- Tableaux de base numérotés de 1 à 8;
- Tableaux de classement PC(n) numérotés de 1 à 6;
- Tableaux de synthèse S(n) numérotés de 1 à 4.

En ce qui concerne la méthodologie, il faudra consulter la fascule remis à cet effet avec les résultats et les commentaires sur l'exercice 1987.

COMMENTAIRES DE L'ETUDE DE RENTABILITE DES LIGNES 1988

I. INTRODUCTION

Le commentaire de cette année sera présenté sous quatre rubriques et sous une forme comparative. Les quatre rubriques sont:

- Réseau et kilomètres parcourus;
- Différents coûts au km;
- Structure des coûts
- Recettes, marges et divers.

Le commentaire sera bâti sous une de comparaisons de l'exercice 1988 avec les exercices de 1985 à 1987.

II. RESEAU ET KILOMETRES PARCOURUS

2.1. Réseau de l'ONATRACOM

Le réseau couvert par l'ONATRACOM a fortement augmenté en 1988. En effet, de 1985 à 1987, le réseau était plus ou moins stationnaire avec une longueur de quelques 5.800 km, alors qu'il passe à 6.500 km en 1988. Ceci s'explique par l'augmentation du nombre de lignes exploitées, celles-ci étaient de 71 en 1985, 66 en 1987, 85 en 1987 et 96 en 1988. Cette augmentation du nombre de lignes conduit naturellement à celle des kilomètres parcourus.

2.2. Kilomètres parcourus

Selon les prévisions d'exploitation, l'ONATRACOM devait parcourir 2,7 millions de km en 1985 et 2,8 millions en 1986. Sur les deux années, la moyenne par bus était respectivement de 45.000 km et 47.000 km. Ces réalisations sont plus ou moins surrestimées, car on remarque qu'il ya toujours un "gap" important entre les prévisions et les réalisations en faveur de ces premières. Pour les années 1987 et 1988, les kilomètres parcourus sont respectivement de 3,5 et 4,0 millions ce qui correspond à des moyennes par bus de 26.504 km et de 31.956 km. La décomposition de cette moyenne par catégorie de lignes montre que le bus des lignes interurbaines fait 50.573 km, celui des lignes sub-urbaines 32.682 km et celui des lignes urbaines 28.761 km.

La CCO a toujours fait remarqué que la moyenne par bus était faible et qu'il fallait chercher tous les moyens pour y remédier, évidemment tout en étant conscient du problème posé par l'immobilisation des bus destinés au transport des fonctionnaires en dehors des heures de pointe. En fait, l'augmentation de la moyenne est parmi les quelques moyens pouvant permettre de réduire les frais de structure unitaires, et donc d'améliorer les marges de l'Office. Ici, il faut comprendre que le kilomètre marginal dont on parle est celui qui couvre au moins son coût variable.

III. DIFFERENTS COÛTS, NIVEAUX ET STRUCTURE

3.1. Niveaux en valeurs absolues

3.1.1. Coûts variables

Parmi les coûts variables, le carburant et les lubrifiants occupent le premier rang, avec des coûts unitaires de 35 FRW en 1985, 34 FRW en 1986, 30 FRW en 1987 et 33 FRW en 1988, année pendant laquelle cette rubrique réamorce un mouvement à la hausse.

L'année 1988 se traduit par une augmentation de 3 FRW/km pour le carburant, alors que les années précédentes, cette rubrique diminuait pour atteindre le plancher en 1987, l'une des meilleures années de l'ONATRACOM, du moins au niveau de l'exploitation des lignes. Apparemment, cette hausse n'est pas due à une quelconque augmentation des prix.

Les pneumatiques représentent l'une des rubriques des coûts variables dont l'évolution semble être excellente maîtrisée. En effet, leur niveau oscille entre 10 FRW et 11 FRW, à part l'année 1986 où il se situait à 13 FRW. Malgré tout, cette rubrique augmente aussi de 1 FRW en 1988 par rapport à 1987.

Le comportement des coûts d'entretien et des réparations peut être ainsi décrite: en 1985, le niveau était de 4 FRW pour doubler en 1986, passant ainsi à 8 FRW. Pour 1987 et 1988, cette rubrique a augmenté de 75% pour passer à 14 FRW.

Cette augmentation s'explique en partie ou entièrement par l'amélioration de la comptabilisation des frais d'entretien et de réparation, surtout au niveau de la réparation des bus par le Garage Diesel et les garages succursales, c'est dire au niveau du compte "Production de l'entreprise pour elle-même", compte interne qui n'était pas encore créé en 1985 et qui ne fonctionnait pas encore comme il faut en 1986.

Les salaires et les frais de mission des chauffeurs et convoyeurs augmentent chaque année de 1 FRW/km avec un plancher de 14 FRW/km en 1985, et un maximum de 18 FRW/km en 1988, soit une augmentation de 2FRW/km par rapport à 1987.

Cette augmentation des charges de personnel peut s'expliquer par les raisons suivantes:

- Progression annuelle des salaires;
- Embauche du personnel féminin pour la vérification des tickets;
- Instauration du système de paiement des soins médicaux aux employés.

En conclusion, on constate que les coûts variables ne sont stables que pour les années 1986 et 1987, avec des niveaux respectifs de 70 FRW et 69 FRW. Pour 1985, le niveau était de 65 FRW pour passer à 76 FRW en 1988, soit une augmentation de 7 FRW/km en 1988.

Cette augmentation devrait attirer l'attention du management de l'Office pour étudier si elle est normale ou si elle le résultat des problèmes de maîtrise des coûts.

3.1.2. Coûts de structure

Les coûts de structure directs qui comprennent les amortissements, les charges nettes des garages diésel et les autres coûts directs du Service d'Exploitation comme le contrôle des bus figurent parmi ceux qui ont fortement diminué depuis 1985.

Cette diminution doit être surtout due à la révision du taux d'amortissement qui était de 30% en 1985 et 1986 et de 20% pour les autres exercices. En effet les amortissements ont passé de 23 FRW/km en 1985, 20 FRW en 1986, 10 FRW en 1987 à 15 FRW en 1988.

Pour l'exercice 1988, l'augmentation du coût au km des amortissements traduit un phénomène que l'Office devrait étudier en profondeur. En effet, cette augmentation veut dire que le kilométrage parcouru n'a pas augmenté proportionnellement à celle des bus, ce qui est en cohérence avec la moyenne de kilomètres parcourus par bus qui est faible. Ceci pose bien sûr le problème de l'utilisation optimale des bus que l'ONATRACOM acquiert du jour au lendemain.

Dans l'ensemble, les coûts de structure direct se caractérise par une stabilité manifeste. En effet, ils varient de 21 FRW à 18 FRW sur les quatre ans. Cela ne veut évidemment pas dire que le ces coûts se situent à un niveau optimal.

L'Office a enregistré des résultats importants au niveau de la maîtrise des coûts de structure indirects. En effet leur niveau est passé de 27 FRW en 1985, 18 FRW en 1986, 12 FRW en 1987 et 13 FRW en 1988. Mais à ce niveau, il y a toujours lieu de faire mieux en améliorant la moyenne des kilomètres parcourus.

3.1.3. Coûts directs et coûts complets

Pour les coûts directs, ils sont stationnaires en 1985 et 1986, avec des niveaux respectifs de 109 FRW et 110 FRW. L'exercice 1987 a été le meilleur avec un niveau de 97 FRW, tandis qu'on constate une tendance à la hausse en 1988, avec un niveau de 110 FRW. Ceci est dû essentiellement aux causes ci-dessus soulignées au niveau des coûts variables et des coûts de structure.

3.2. Structure des coûts

3.2.1. Introduction

Pour bien étudier la structure des coûts et apporter le maximum d'interprétations, il faudrait disposer de quelques statistiques sur d'autres entreprises de transport en commun. En l'absence de telle données, les paragraphes ci-dessus ne prétendront aucunement pas à une vision normative de la structure des coûts de l'ONATRACOM.

3.2.2. Coûts variables

Le carburant représente à peu près 1/4 du coût total en variant de 26% à 27%. Ceci montre que l'évolution des charges de carburant est rigoureusement maîtrisée. Ceci est le cas pour le coût des pneumatiques dont la proportion varie seulement de 8% à 11 %, avec une stabilité réelle sur les exercices 1987 et 1988 où il représente environ 9%.

4.2. Marges

4.2.1. Marges absolues de l'exercice 1988

Pour 1988, la marge sur coûts variables atteint 144 millions de FRW. C'est dire que l'Office dégage un surplus de ce niveau après avoir couvert les charges de carburant, de pneumatiques, de réparation et d'entretien et les salaires et frais de mission des chauffeurs et des convoyeurs. Ce montant est évidemment insuffisant pour couvrir tous les frais fixes.

Par catégorie de lignes, les lignes interurbaines dégagent 117 millions de FRW, les lignes sub-urbaines, 100.000 FRW, tandis que les lignes urbaines sont déficitaires de 13 millions de FRW. Pour cette dernière catégorie, cela veut dire que même les frais de fonctionnement ne sont pas couverts. Les locations et divers dégagent une marge positive de 40 millions de FRW.

La CCO a toujours insisté sur l'importance de cette marge dans la prise de décisions concernant la gestion du réseau. En effet, Premièrement, toute ligne qui dégagne une marge sur coûts variables positive n'est pas une mauvaise ligne même s'elle déficitaire, car en la supprimant, on creuserait le déficit de l'Office; deuxièmement, le renforcement d'une ligne ou son maintien devraient être subordonné à certaines considérations dont la couverture des charges variables.

La marge brute atteint le montant de 84 millions de FRW. Cette marge exprime le montant dégagé après la couverture des frais variables et de l'amortissement des bus et des minibus. Cette marge est destinée à couvrir les autres frais de structure.

Par catégorie de lignes, les lignes interurbaines dégagent 71 millions de FRW de marge positive, les sub-urbaines font 2 millions de FRW de marge négative, les lignes urbaines atteignent une marge négative de 25 millions de FRW et les locations et divers font une marge positive de 40 millions de FRW.

La couverture des coûts directs dégagent une marge négative de 63 millions de FRW. C'est dire qu'après la couverture des amortissements des bus et minibus, l'Office ne parvient pas à couvrir les frais fixes d'exploitation, surtout les charges des garages succursales. A ce sujet, la CCO a toujours recommandé d'étudier en profondeur le problème de l'optimisation de la gestion de ces garages.

Par catégorie, les lignes interurbaines deviennent déficitaires de 42 millions de FRW, les lignes suburbaines de 4 millions et les lignes urbaines de 51 millions de FRW. Seule la catégorie des locations et divers dégagent une marge sur coût direct positive de 39 millions de FRW.

En intégrant la quote part des frais généraux à la marge sur coût direct, on obtient une marge sur coût complet déficitaire de 114 millions de FRW. Les lignes interurbaines supportent un déficit de 81 millions, les lignes suburbaines 10 millions, les urbaines 61 millions. Les locations sont la seule catégorie bénéficiaire de 36 millions de FRW.

Concernant la marge sur coût complet, sur 96 lignes exploitées par l'ONATRACOM, seules 9 d'entre elles dégagent une marge sur coûts complets positive, tandis que 16 lignes couvrent tous leurs coûts directs.

En faisant l'hypothèse que l'Office recevra gratuitement le matériel de transport, on met en évidence une autre marge, la marge sur coût complet soustraction faite des amortissements. Cette marge est aussi négative de 53 millions de FRW.

C'est dire qu'en ne prenant pas en considération les amortissements des bus reçus en dons, l'ONATRACOM ne parvient toujours pas à couvrir toutes ses dépenses.

Concernant les raisons qui expliquent ces déficits, on peut se référer aux commentaires sur l'exercice 1987 qui sont toujours d'actualité.

4.2.2. Marges par rapport aux recettes

La marge sur coût variable de l'ONATRACOM est toujours positive, avec des niveaux fluctuant d'année en année. Entre 1985 et 1988, les niveaux sont respectivement les suivants: 35%, 19,9%, 25% et 19%.

La marge sur coût direct est toujours négative depuis 1985 avec des niveaux de 9% pour cet exercice, 25% en 1986, 4,3% en 1987 et 17% en 1988.

La marge sur coût complet est évidemment négative sur toute la période considérée avec des niveaux respectifs de 36% en 1985, 45% en 1986, 17% en 1987 et 31% en 1988.

La marge sur coût complet moins amortissement est aussi toujours négative avec des niveaux respectifs de 12% en 1985, 22% en 1986, 6% en 1987 et 15% en 1988. En d'autres termes, même dans le cas où le matériel de transport est fourni gratuitement, l'ONATRACOM devrait encore bénéficier d'une subvention pour équilibrer ses comptes.

Dans l'ensemble, le taux de couverture des charges évolue positivement. Il était de 74% en 1985, de 85% en 1987 et de 76% en 1988. Quant à l'année 1986, elle s'est caractérisée par une mauvaise couverture des charges avec un taux de 69%.

4.3. Tarifs d'équilibre

Le tarif d'équilibre varie chaque année sans jamais descendre au niveau du tarifs actuellement pratiqué par l'ONATRACOM, soit 2,5 FRW.

Pour le transport interurbain, le tarif avec amortissements était de 4,14 FRW en 1985, 3,7 FRW en 1986, 2,81 FRW en 1987 et de 3,20 FRW en 1988, tandis que le tarifs sans amortissement était de 3,45 FRW en 1985, 3,11 FRW en 1986, 2,55 FRW en 1987 et de 2,81 FRW en 1988.

Pour le transport suburbain, le tarif d'équilibre avec amortissement était de 5,72 FRW en 1985, 4,92 FRW en 1986, 5,39 FRW en 1987 et de 5,13 FRW en 1988, tandis que sans amortissement, le tarif d'équilibre était de 4,74 FRW en 1985, 4,16 FRW en 1986, 4,89 FRW en 1987 et 4,51 FRW en 1988.

Pour le transport urbain, une estimation globale montre qu'il faudrait environ 34 FRW par parcourt pour que l'ONATRACOM puisse couvrir tous ses coûts.

CONCLUSION

Les résultats de l'exercice 1988 montrent que l'exploitation des lignes de l'ONATRACOM reste déficitaire malgré des efforts manifestes au niveau de la maîtrise des coûts et des recettes. Néanmoins, on remarque une tendance à la hausse des coûts unitaires, laquelle tendance il faut surveiller.

Parmi les causes des déficits, il est connu que le transport des fonctionnaires figure en bonne place. Evidemment, il faut voir que le problème n'est pas le transport des agents de l'Etat, mais l'immobilisation des bus pendant les heures de service. L'autre problème consiste en la desserte de lignes interurbaines dont 9 ne couvrent même pas leurs frais variables. L'autre problème qui semble ne pas toujours attirer l'attention qu'il faut consister dans le dimensionnement et la gestion des garages succursales.

Parmi les solutions envisagées, le contrat programme en cours de négociation permettra de résoudre certains des problèmes de l'Office. Mais évidemment, il ne faudrait que le contrat programme soit un alibi pour ne rien entreprendre comme innovation ou continuer les efforts remarquables au niveau de la gestion. D'où la nécessité d'assortir le contrat programme d'un minimum d'exigences que l'ONATRACOM devrait respecter.
